EDUCATION

BSc in Computer Science
— University of Valladolid
2022–2026

ACHIEVEMENTS

Upper Secondary Education: **10/10**
Highest Honours
BSc: **8.4/10** — Highest Honours in
Artificial Intelligence Fundamentals

DESIGN SKILLS

- Serious Games
- Gamification
- Game Design
- UX Design
- Prototyping

Computer Science graduate focused on UX and Game Design, particularly in how interactive experiences can make learning more engaging. I've designed and developed educational platforms and games, combining UX/UI, game mechanics and software development. I enjoy turning ideas into interactive experiences and exploring how design can influence engagement and motivation.

RELEVANT PROJECTS & EXPERIENCE

Serious Game Design & Development

2025 – 2026

University of Valladolid

I designed two educational videogames to teach basic programming concepts that were previously taught through games that had struggled to keep students engaged. I worked on redesigning the game experience and mechanics to make the games more attractive, enjoyable and effective at maintaining students' motivation throughout the learning process. I also used AI tools to explore ideas, prototype concepts and support the development of the games.

Gamispace Platform — Game-Based Learning Platform 2025 – 2026

Study Group in Teaching Innovation in Computer Science

During my final year, I worked on the design and development of Gamispace, an educational platform that uses videogames to help university students learn basic concepts across different subjects. I designed the platform's core dynamics, including the subject structure, ranking system and features aimed at keeping users engaged and motivated. I also designed and developed the frontend, as well as the backend supporting the platform.

TECHNICAL SKILLS

Programming Languages: **Java, TypeScript, Python, C, C#**

Game Development: **Unity 2D/3D**

Web Development: **React, Node.js, Express**

Software Engineering: **Object-Oriented Programming, Software Architecture**

Data & Infrastructure: **SQL/MySQL, Docker**

AI Workflow: **AI-assisted Ideation, Prototyping & Development**

Board of European Students of Technology.

As a member of BEST, I worked in multidisciplinary teams to organize events such as engineering competitions, job fairs and courses. I also took part in international courses in Denmark, Portugal and Estonia, learning to adapt quickly to new environments and ways of working.
